## OSU-Newark Future Engineers Visit

For the third year in a row, The Ohio State University – Newark Engineering Learning Community's students visited the Aerospace Center. The future engineers toured the Boeing Virtual Customer Integration Lab, went underground in the Bionetics-run Air Force Primary Standards Lab, and got to put the tilt on the three-axis device operated by Bionetics' Defense Engineering Services Group. The day proved the point: There are engineering careers right here close to home in Licking County.

## Wrapping Up Capital Projects

A long-planned upgrade to the main entrances to the Boeing Building wrapped up with the East Entrance opening back up in early November. Two entrances, demolition of the former Metrology Building, roof upgrades, parking lot upgrades, and security gate additions are among the year's capital projects in final phases for 2016. As always, check the progress on line.

## On-Line Message Center Continues

A website targeted at the Aerospace Center's 1,350 employees want to see has been continuously operating for over a dozen years. Once called OntheBase.com, the site now runs as the online Message Center. A consolidated version of the Message Center also scrolls on on-site marquees at six locations.
